Board  
Certified  
Behavior Analyst = **BCBA**

What We Know?

Board Certified  
Assistant  
Behavior Analyst = **BCaBA**

Is your system currently using a  
**BCBA** **OR** **BCaBA**  
as a provider of developmental services?

Use the polling tool under your  
name to make your selection.

## Question

What would a BCBA provider do that  
is different from other professionals  
who provide developmental services?

Your thoughts? Let's chat.

If using a BCBA to provide developmental services, how many hours would be provided?

Your thoughts? Let's chat.

How would billing be done using a BCBA to provide developmental services?

Your thoughts? Let's chat.

Will there be training/support for the BCBA's transitioning into early intervention services? And who will be responsible for providing this training?

Your thoughts? Let's chat.

What is a sensitive way to discuss adding a BCBA provider to the plan especially if the family has not considered a possibility of autism?

**Concerns about Autism: Talking with Families**

How you begin is as important as what you say. The most important thing is to be sensitive to the family's needs and concerns. The most important thing is to be sensitive to the family's needs and concerns. The most important thing is to be sensitive to the family's needs and concerns.

**Who Can Diagnose Autism?**

Diagnosis and treatment of autism spectrum disorders (ASDs) is a complex process. It involves a team of professionals, including psychologists, educators, and healthcare providers. The team works together to assess the child's strengths and weaknesses, and to develop a plan for intervention.

**How to Talk to Families**

When talking to families about autism, it's important to be sensitive to their needs and concerns. Start by asking the family what they know about autism and what they are most concerned about. Then, provide information in a way that is easy to understand and that respects the family's beliefs and values.

**Integrated Learning Strategies**

Integrated Learning Strategies (ILS) is a program that provides a comprehensive approach to the treatment of autism spectrum disorders. It combines behavioral, educational, and medical interventions to help children with autism reach their full potential.

Drop your pointer to make your selection.
